

BIZET 1

Lolium perenne

- Excellent wear tolerance
- High red thread resistance
- Winter Fusarium tolerance
- Top sport variety in the UK and the Netherlands

4salt

Top ranked in selective recommended lists

BIZET 1 has made the way through to the top of two of Europe's most demanding recommended lists for sport use: STRI in the UK and Grasgids in the Netherlands.

Red thread and Fusarium tolerant

On both lists BIZET 1 shows excellent resistance to red thread and with very good snow mold tolerance from the Dutch list.

Sport variety = wear tolerance

The main strength of BIZET 1 is its excellent wear tolerance in the Netherlands, confirmed by a very high score for live ground cover and recovery in the STRI trials.

Recommended use

BIZET 1 is recommended for any high demanding sport mixture, but it can also advantageously be part of mixtures used for playgrounds, parks and home gardens. The early expression of wear tolerance makes BIZET 1 a top choice for overseeding of Bermuda grass.

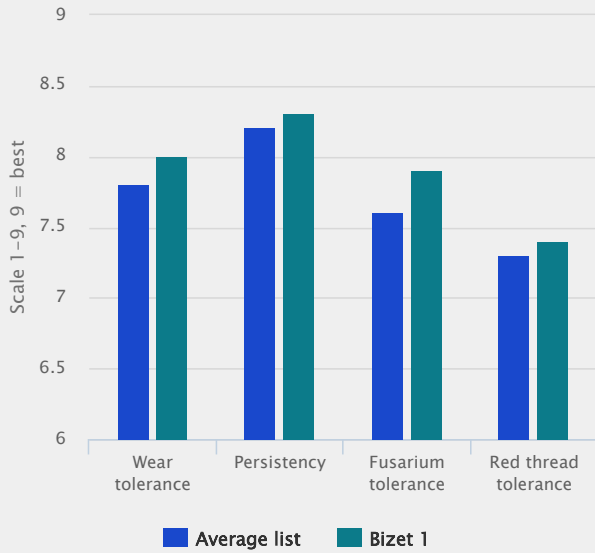

Technical Specifications

- Perennial ryegrass
- Sport type with excellent disease tolerance
- Listed/recommended in EU
