

BOVINI

Lolium perenne

- Very few stems in regrowth
- Large spring window - important for a late variety
- Excellent rust resistance
- Good yield distribution

Taylored for grazing

BOVINI more than qualifies for the label:

"Grazing variety"

Window wide open

A large window in spring where the forage quality remains at a high level. 61 days! Two months of easy grassland management.

Mainly vegetative and very few stems

In the period following the main heading, there is no significant stem production in BOVINI.

Result: Palatability and forage quality!

Healthy leaves & shoots

During summer and autumn, when rust attacks are frequent, BOVINI will stay green and healthy. Once again an ingredient to preserve palatability and quality of the forage.

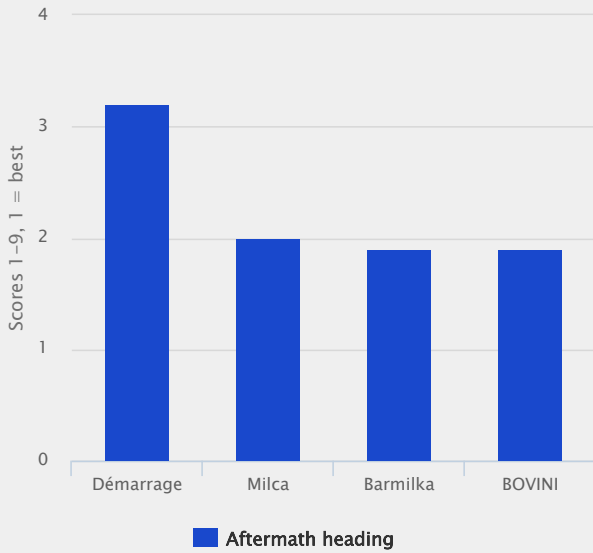

Technical Specifications

- Perennial ryegrass
- 61 days spring window....The Grazing Variety
- Listed/recommended in EU
BE FR NL UK
- Lateness: Late
