

CUTMAX ORIGINAL

ForageMax

- Very high yield
- Very stable
- 2-4 storage cuts
- Suitable for temperate and warm climates

CutMax - Original - Very high and stable yield

CutMax - Original is ideal for 2-4 silage cuts per year in a rotational system with renewal every 3-6 years. It is a high yielding mixture providing not only good quality but also well balanced grass sward composition over the season

The mixture contains cocksfoot, which ensures a very high and stable yield also under more dry conditions. Thus, CutMax - Original is suitable for cold and temperate regions as well as hot and dry areas.

Seeding rate, KG/HA: 25-30

Technical Specifications

- CUTMAX ORIGINAL
- Very high and stable yield

CutMax Original

Duration: 2-4 years

Mixture Composition
