

# CAPTUR

## Dactylis glomerata

- High sugar content provide a rich source of easily fermentable sugars, enhancing the palatability and nutritional value for livestock.
- Outstanding disease tolerance to rust ensures a healthier, more robust crop, reducing the need for chemical interventions.
- Early growth allows for a high first cut, maximizing the productivity of your forage.
- Overall exceptional yield in the spring but also a overall high total cut for the entire growing season, ensuring abundant forage supply.

## Elevate Your Forage Production with Captur

CAPTUR is our exceptional new variety of forage grass cocksfoot, now proudly listed on the recommended French list.

CAPTUR is designed to deliver superior performance and meet the highest agricultural standards. With its unique characteristics, CAPTUR is set to redefine your forage production with unparalleled benefits.

## Why Choose CAPTUR?

CAPTUR is the forage grass variety you need for a high-performing, resilient, and nutritionally superior crop. This groundbreaking variety boasts a high sugar content, ensuring that your livestock receive maximum nutritional benefits, leading to healthier and more productive animals. Its impressive disease tolerance, particularly against Rust, minimizes crop loss and reduces the need for chemical interventions, promoting sustainable farming practices.

One of the standout features of CAPTUR is its early growth initiation in late winter to early spring. This early start allows for a high first cut and a prolific total spring cut, maximizing productivity right from the beginning of the
