

FARANDOLE

Medicago sativa

- High spring yield
- Consistent yearly production
- Nematode resistant variety

Outstanding Yield Performance

Farandole delivers exceptional yields in cold climates, producing 6.6 tons of dry matter in the first spring cut and 10.8 tons total in spring. With an additional 6.6 tons in autumn, it achieves an annual yield of 17.4 tons, ranking second on the French official list. This ensures a steady and abundant forage supply for farmers.

Superior Persistency and Resistance

Farandole excels in persistency and resilience, scoring 8.2 for persistency and ranking third in France. Its robust nature ensures long-term productivity, while its strong nematode resistance (7.6) protects against infestations. This combination makes Farandole a reliable choice for sustainable and resilient alfalfa production.

Optimized for Cold Climates

Farandole thrives in temperate and cold climates, making it ideal for regions with harsher weather. Officially recognized in France, it ensures robust growth and high yields even in adverse conditions. Farandole's adaptability makes it a versatile and dependable forage crop for a wide range of temperate environments.

Technical Specifications

- Alfalfa/Lucerne
- Your Top Choice for High Yield and Resilience
- Listed/recommended in EU FR
- Dormancy group: 4
