

TRANSIST 2600

Lolium x boucheanum

- Alternative to perennial ryegrass for bermuda grass overseeding
- Fast establishment
- Lower persistency than perennial ryegrass
- Also possible as nurse grass in cool season mixtures

Spring transition

Transist 2600 has been bred to disappear smoothly and quickly in the late spring as bermudagrass is ready to grow.

When blended with perennial rye, the Transist 2600 will exit first opening up the turf canopy to sunlight which benefits bermudagrass.

Technical Specifications

- Hybrid ryegrass turf
- An alternative solution to ease spring transition in oversown bermuda grass.
- Listed/recommended in EU CZ
