

# BOVINI

*Lolium perenne*

- Very few stems in regrowth
- Large spring window - important for a late variety
- Excellent rust resistance
- Good yield distribution

## Taylored for grazing

BOVINI more than qualifies for the label:

"Grazing variety"

## Window wide open

A large window in spring where the forage quality remains at a high level. 61 days! Two months of easy grassland management.

## Mainly vegetative and very few stems

In the period following the main heading, there is no significant stem production in BOVINI.

Result: Palatability and forage quality!

## Healthy leaves & shoots

During summer and autumn, when rust attacks are frequent, BOVINI will stay green and healthy. Once again an ingredient to preserve palatability and quality of the forage.

## Technical Specifications

- Perennial ryegrass
- 61 days spring window...The Grazing Variety
- Listed/recommended in EU BE FR NL UK
- Lateness: Late
