

CUTMAX DIGEST

ForageMax

- Yield and quality in one
- Highest possible milk production
- 2-4 silage cuts
- For temperate and warm climates

CutMax - Digest - Yield and quality in one

With festulolium

CutMax - Digest is composed with festulolium, which has a very high digestibility and increased sugar content - this mixture provides the highest quality. Festulolium and tall fescue increase persistency and drought resistance of the sward during the season as well as over longer terms.

CutMax - Digest secures the highest intake and milk production. It is ideal for 2-4 silage cuts per year in a rotational system with renewal every 3-6 years.

CutMax - Digest is suitable for cold and temperate regions as well as hot and dry areas.

Seeding rate, KG/HA: 25-30

Technical Specifications

- CUTMAX DIGEST
- Yield and quality in one

CutMax Digest

Duration: 2-4 years

Mixture Composition

| | |
|--|-----|
| Red clover | 15% |
| Festulolium type ryegrass | 25% |
| Tall fescue | 25% |
| Perennial ryegrass intermediate tetraploid | 20% |
| Timothy | 15% |
