

FUEGO

Festuca arundinacea

- Very drought and heat tolerant
- Excellent total dry matter production
- Late heading
- For grazing and/or conservation

Very drought tolerant

Fuego is one of the most drought tolerant tall fescues on the market; allowing forage production when everything else has stopped growing.

Total dry matter yield

Right from the beginning of the season through spring, summer and autumn, Fuego produces continuously for an annual dry matter yield far above the potential of ryegrasses.

Late heading

Fuego is a late heading variety and finds use as well for grazing as for conservation as hay or silage.

Technical Specifications

- Tall fescue
- Tremendous dry matter production and drought resistance
- Listed/recommended in EU PL
- Lateness: Late
