

GIACOMO

Lolium multiflorum

- Very good rust resistance
- Leafy regrowth
- Good yields and high 1st cut
- Diploid variety (quicker drying)

Excellent Rust Resistance

Rust is the bane of many farmers, threatening the quality of feed for their livestock. With Giacomo's excellent rust resistance, you can finally breathe a sigh of relief and enjoy high-quality forage.

Leafy Regrowth

Leaves are the primary source of nutrients for your cattle. With Giacomo, ensure your field provides abundant nutrients through its exceptionally leafy regrowth.

Diploid Variety with High Yields

Normally, diploid varieties have lower yields compared to their tetraploid counterparts. However, Giacomo achieves dry matter yields on par with tetraploids and, due to its lower water content, ensures a shorter drying period.
